MOLEY MAGNETICS INC.

ESA Hydraulic magnets are designed for demolition and scrap industry or anywhere where flexibility of attachments is beneficial.

The Generator, pump and controls are mounted on top of the magnet under a heavy duty steel shell. Installing the magnet is made easy by two quick connections. All that is required is for is connecting the two hydraulic lines and the lifting chain.

The ESA Generators operate on the bucket or auxiliary Hydraulic Lines. The magnet is controlled with the joystick, foot pedal or auxiliary switch. If installed on a bucket line the return line must be "free flow return line".
